IBM PC300GL - 6272 EMEA FRU-P/N Cross-Reference ListApplicable to: **EMEA**

IBM's PC 300GL systems include models with Intel(R) Corporation's Pentium(R) processors and the new breed of Pentium processor with MMX(TM) technology. With double the internal cache, the new MMX processors provide an immediate performance improvement over existing Pentium processors. Performance can be further enhanced using software that exploits the new MMX technology. The MMX technology adds new instructions and data types to accelerate the performance of multimedia and communications software. The IBM PC 300GL systems provide premium desktop computing to LAN-attached and stand-alone system users and helps make PC administration tasks simpler and more cost-effective. Each IBM PC 300GL provides the ability to support high-speed, 64-bit PCI graphics performance that allows you to take advantage of many popular graphics applications. A license for Lotus SmartSuite is included to provide robust business software. (Fulfillment is via a CD. Diskettes and hardcopy documentation available at extra charge.) Lotus SmartSuite, and Net Finity, provide the ideal tools to help manage networks and complete business tasks. If you are responsible for delivering or supporting desktop solutions in your organization, you can use the built-in support features providing advanced diagnostics, connection to the IBM Support Center (using an optional modem), power management, and plug-and-play.

Please be aware that the FRU and Part Number information provided in this cross reference list was only accurate at the initial release of the product and will not have been updated.
